Summary

CSE student specializing in Data Science with experience in AI, RAG, and full-stack development. Skilled in Python, data analytics, machine learning, LLMs, and modern web technologies, with exposure to Docker and CI/CD.

Skills

- **Full Stack:** React.js, Node.js, Express.js, MongoDB, PostgreSQL, SQL, JavaScript, HTML, CSS, Tailwind CSS, RESTful APIs, JWT, Google OAuth
- **AI / ML & LLM:** Python, LangChain, Scikit-learn, NLTK, TF-IDF, Random Forest, Voting Classifier, Linear Regression, RAG Pipelines, Prompt Engineering, Google Cloud (Gemini API, Google Earth Engine).
- **DevOps & Tools:** Git, Docker, Docker Compose, Jenkins, Jira
- **Soft Skills:** Communication, Organizational Leadership, Analytical Thinking, Teamwork, Adaptability

Projects

Fake News Detection System | AI / ML / NLP

Tech Stack: React.js, Node.js, Express.js, MongoDB, Python, Scikit-learn, NLTK, TF-IDF, JWT, Google OAuth, Docker, Docker Compose, Jenkins, Tailwind CSS

- Built a decoupled MERN app with RESTful APIs, JWT + Google OAuth auth, and a Python ML service delivering real-time fake news detection in under 3 seconds.
- Engineered an NLP pipeline (TF-IDF, Random Forest, Voting Classifier) with end-to-end data ingestion, cleaning, feature extraction, and validation on labelled news datasets.
- Automated CI/CD using Jenkins + Docker Compose (Checkout → Build → Deploy), containerising all three services for consistent, repeatable deployments.

Multi-PDF RAG Chat System | AI / ML / RAG

Tech Stack: Python, LangChain, Google Gemini API, Streamlit, Docker

- Built a conversational RAG pipeline over multiple PDF documents using LangChain delivering context-aware responses via Google Gemini API in under 3-5 seconds.
- Engineered an end-to-end document processing pipeline with text extraction, semantic chunking, vector embedding generation, and similarity-based retrieval on user-uploaded PDFs.
- Deployed a Streamlit frontend with persistent chat history and source-grounded response generation, containerised using Docker for consistent deployments.

Lavender Crop Field Mapping | Fuzzy ML + Satellite Data

Tech Stack: PlanetScope Satellite Imagery, CBSI-MSAVI2, MSAVI2, PCM, NC, Fuzzy Machine Learning, MMD.

- Developed a fuzzy machine learning framework to map Lavender crop fields in the Doda district of Jammu & Kashmir using temporal PlanetScope satellite imagery and vegetation indices.
- Evaluated PCM and NC classifiers with different training sample selection techniques, achieving the best mapping performance using NC with CBSI-MSAVI2 and the individual-sample-as-mean approach.

Education

- | | |
|---|----------------------------------|
| • B.Tech CSE – NIIT University, Neemrana | CGPA: 7.46 (2023–Present) |
| • Class XII (CBSE) – Rishikul Vidyapeeth Sonipat | 82.2% (2023) |

Certification

- **Python with DSA** – Udemy (2026) [[Certificate of proof](#)]
- **Power BI Desktop for Business Professionals** – Infosys Springboard (2025) [[Certificate of proof](#)]
- **5th International Conference -CISCT(2026)** [[Certificate of proof](#)]

Co-Curricular Activities

- **Basketball Coordinator:** Served as the Basketball Coordinator, organising tournaments, managing teams, and fostering a competitive sports culture on campus.
